

R.V.R. & J.C. COLLEGE OF ENGINEERING

Course Registration and Course Regulations

Academic Year: 2026–2027

Document ID: RVRJC-CRS-004

Version: 1.8

Effective Date: 01 July 2026

Policy Owner: Academic Registration Office

1. Purpose

These regulations establish procedures for course registration, prerequisites, elective selection, add/drop, withdrawal, credit requirements, and course completion.

2. Course Registration

Students must register for courses before the beginning of every semester through the student academic portal. Students should consult their academic advisor before finalizing registration.

3. Registration Period

The normal registration period is announced before each semester. Late registration requires approval and may attract an administrative fee.

4. Course Load

A regular undergraduate student may normally register for 18 to 24 credits per semester. Students with academic backlogs may receive a restricted course load. Overload requests require department approval.

5. Course Prerequisites

Certain courses require successful completion of prerequisite courses. For example, Data Structures and Algorithms may require successful completion of Programming Fundamentals. Students who have not completed a required prerequisite cannot normally register for the dependent course.

6. Elective Courses

Students must complete prescribed elective credits. Electives may include professional, open, and interdisciplinary electives. Availability depends on faculty capacity and minimum enrollment.

7. Course Add/Drop

Students may add or drop eligible courses during the first seven calendar days of the semester. Changes after the deadline require special approval.

8. Course Withdrawal

Students may request withdrawal before the withdrawal deadline. Approved withdrawal may be recorded as a withdrawal status rather than a failure.

9. Repeating a Course

A student who fails a course must complete it again through an approved repeat mechanism. The transcript may retain the previous attempt while applicable grade calculation follows College policy.

10. Credit Transfer

Students who completed courses at recognized institutions may request credit transfer by submitting an official transcript, course syllabus, credit information, assessment details, and institution information. The relevant department determines equivalence.

11. Course Completion

A course is successfully completed when the student meets attendance requirements, completes assessments, obtains a passing grade, and satisfies practical requirements where applicable.

12. Academic Advisor Approval

Advisor approval may be required for overload requests, unusual course combinations, prerequisite exceptions, graduation-semester adjustments, and course substitutions.

13. Course Substitution

Course substitutions may be approved when a prescribed course is unavailable or an approved curriculum transition applies. Department approval is required.

14. Minimum Graduation Credits

Students must complete the total credits prescribed by their program. For standard Bachelor of Technology programs, the normal requirement is approximately 160 credits, subject to the curriculum approved for the student's admission batch.

15. Registration Problems

Students experiencing technical problems should capture relevant screenshots and contact the Academic Registration Office with student ID, course code, and problem description.
